

IdentityForge Connector

IdentityForge Connectors Auto-Provision To Your IAM Vendor Software Solutions & 3RD Party Applications

IDMWORKS IdentityForge connectors bridge the gap between your IAM vendor solution software and third party applications, including the leading HR, CRM & healthcare applications.

Auto-provisioning reduces administration costs and provides better control of access and resources.

IdentityForge Connectors automate functions that administrators usually perform manually as it functions as a trusted virtual administrator performing tasks such as creating login IDs, assigning dataset access, changing passwords, managing access rules, as well as alias catalog management.

Thanks to our standard access point, you can bridge cross-platform technologies and vendors without re-writing connector integrations. Our out-of-the-box adapter integration takes days, not weeks or months to deploy. Together these eliminate complex and costly developments and extend the ROI of your existing technology investments.

IdentityForge Connectors

- AC2F
- AS400/iSeries
- Azure AD
- Cent OS
- Cerner
- EPIC EMP PROV
- FHIR
- Google Apps
- HL7
- HP NonStop (Tandem)
