## NON-EMPLOYEE IDENTITY SUITE

### ENSURE THAT YOUR NON-EMPLOYEES HAVE THE RIGHT ACCESS TO YOUR DATA & APPLICATIONS

It's not just malicious cyber-attacks or criminal activity that companies need to prepare for. The majority of data breaches originate within companies due to human error or negligence.

Companies rely heavily on network security to protect their data, but firewalls and monitoring systems can do little to prevent a breach when the access to data is not restrictive enough within the organization, particularly when it comes to non-employee access.

Additionally, non-employees may be subject to the same audit and compliance regulations as your traditional employees, so a central repository for anyone with access to your systems is key to clean reporting capabilities.

To protect your data and applications and maintain compliance, your organization's identity and access management must include a way to define and control non-employee access.

To help you achieve this, IDMWORKS now offers the IDMWORKS Non-Employee Identity Suite consisting of two core applications: the IDMWORKS Non-Employee Directory and the IDMWORKS Non-Employee Access Portal.

### IDMWORKS NON-EMPLOYEE DIRECTORY: A CENTRAL REPOSITORY FOR ALL NON-EMPLOYEES

Your organization may engage a variety of non-employee types: for example, vendors, contractors, students, interns, seasonal workers or even volunteers, and being able to efficiently on-board their access, extend their access and revoke their access is key to maintaining the security of your data and applications.

Just as with your traditional employees, your non-employees need the right access at the right time, for the right reasons, but because of the often transitory nature of non-employees, it is imperative that their access is updated when they leave or change roles so that they don't end up as "orphan" accounts in your IAM system.

The IDMWORKS non-employee directory can also be used to collect and store the data that you need from each person based on their job role. For example, a signed non-disclosure agreement from a high level contractor versus basic human resources information from a volunteer, or the creation of a Non-Employee Identifier (i.e. NEID) used to track the non-employee entitlements and allow for a root cause analysis of any user's accesses.

### IDMWORKS NON-EMPLOYEE IDENTITY SUITE FEATURES

- **Both Administrative & Self-Registration for Non-Employees**
- **Expandable To All Employees Or Integrate With Your HR Management System**
- **Ability to Delegate Admin Functions To Vendors & Partner Organizations**
- **Supports Entitlement Management For Non-Employees**
- **Identity Store For Use Across Applications, Including Salesforce, Azure AD & Even Mainframes**
- **Standards-Based APIs For Easy Access & Embedding Of Identity Store Into Other Applications**
- **Works With All IDMWORKS IdentityForge Connectors For Auto-Provisioning**
- **Supports Reconciliation, Reporting & Analytics**
- **Bulk Load capability - Import From File: Load New/Change/Remove (and Transfer or Disable) Users**
- **Exportable: Ability to Extract Identities From The Identity Store For Use By Other Applications**
- **Customizable UI**
- **Customizable Registration Forms**
- **Encryption for Sensitive Data**
- **Supports SSL**
- **Acts As An Authentication Provider Using Oauth2 & OpenID**
- **Notification of Critical Activities**
- **Supports Contextual Auditing Of All Provisioning/De-Provisioning Activities**

*To Protect  
Your Data & Applications  
& Maintain Compliance,  
Your Organization's  
Identity & Access Management  
Must Include A Way  
To Define And Control  
Its Non-Employee Access*

## THE IDMWORCS NON-EMPLOYEE ACCESS PORTAL: SIMPLE TO SET UP & EASY TO USE

The IDMWORCS Non-Employee Portal has an intuitive user-friendly interface and provides simple step-by-step set up screens. The portal comes pre-loaded with the most commonly used attributes and administrators can simply add or modify attributes and entitlements with no coding or database experience required.

The portal supports both administrative and self-registration of non-employees. With criteria set by the organization, the portal provides a single point of entry for a non-employee to meet all of the necessary standards, requirements and approvals before they are granted access to any data or applications.

The portal can also be used to delegate administrative functions to vendors or partner organizations to manage their employees' access.

## SEAMLESS INTEGRATION WITH ALL MAJOR IAM VENDOR SOLUTIONS & ANY 3RD PARTY SOFTWARE

Our standard LDAP and SCIM interfaces allow virtually any 3rd party product the ability to access and work with your registered identities. This can range from basic authentication and authorization to advanced IAM management activities like identity reconciliation, attribute management, entitlement assignment, and password synchronization.

The identity store can also be leveraged as an authentication provider in support of SSO and Federated Authentication initiatives using OAuth2 and OpenID.

All non-employees will go through the authentication process and gain access to the data and applications they need, without having to provision an account to the human resources application or corporate directory store.

IDMWORCS Non-Employee Identity Suite also offers the ability for contextual auditing of all provisioning activities to facilitate easier compliance activities like attestations and auditor initiated probes.

### ABOUT IDMWORCS

Miami, FL based IDMWORCS is a leading consultancy specializing in enterprise identity and access management solutions, services and support since 2004. With hundreds of successful engagements executed for the most recognized global brands, IDMWORCS is recognized for leadership and excellence by their peers, customers, industry experts and partners.

DCMWORCS, a division of IDMWORCS, also provides a full array of data center services from migration planning to disaster recovery consulting.
